<i>Bibliography</i>	<i>p22 – p23</i>
<i>Appendix A: Visual Description of the media player</i>	<i>p24</i>
<i>Appendix B: Source Code and Comments</i>	<i>p25 – p39</i>

Introduction

The aim of the report is to promote the functionality of the media player that was generated and developed within the current use trend of Rapid Application Development philosophy. The concept of RAD programming consists of developing and advancing applications within the use of powerful development frameworks like Microsoft Visual Studio environment, retaining the capacity to deliver consistency in interoperability of preconfigured component facilities while in parallel qualify on working within a sustainable visual environment tool.
