Introduction

The aim of this report is to demonstrate the functionality implemented on a portal site construction build-up upon using the “Joomla!” CMS development tool. The procedure could be resembled with a guiding manual for front-end and back-end users for making an effective use of the web tool.

Description of the procedures will be conducted within both textual and visual material that references the portal’s functionality to readers, confiding that the system incorporates most of current technological services and interactions met on the web as of today.
