Programming Languages Evolution

Systems Analysis
& Visualization

assignment one

“The aim of this report is to provide a brief overview on the evolution of programming languages, referring to some of the most popular achievements, respectably developed from early computing days till current. To safeguard the limitations in word count only 1st, 2nd and 3rd evolved generations will be credited, as while a short notation on 4th and 5th will be provided. Considering the needs and potentials on separate time periods, we will try to analyze this evolution in parallel along with the System within programming languages developed, as long as to have some insight on future’s tendencies.”
