TABEL OF CONTENTS

INTRODUCTION

Today an extend amount of a family's financial income is invested to support young members of the family to enhance the education that is delivered on official schools. That is that parents register their children in extra tutorial schools at the same time they attend Official School Education. Moreover it is observed that while parents lift a heavy financial weight trying to provide complementary resources for their children in a way to advance their qualifications, young people tend to replicate the "school behavior" on the tutorial schools as well. As a result there are numerous circumstances where children end up with decreased educational performance while simultaneously family expenses seem to fail cause.

"[e-Learning is] the delivery of a learning, training or education program by electronic means. E-learning involves the use of a computer or electronic device (e.g. a mobile phone) in some way to provide training, educational or learning material".
